My Skills

Skills Reflects our Knowledge

I've done my secondary studies in Computer Science, that is where I have got basics of programming and continued with IT in University where I've developed my level of programming. Above that, I've got other short courses on Coursera and developed many projects which gave me a great experience. I can develop a web Application, mobile Applications, and I can do that with many programming languages. Above that, I've got other short courses on Coursera and developed many projects which gave me a great experience. I can develop a web Application, a

5 years of experience

HTML 90% CSS 90% JavaScript 90%

Bootstrap 90% C# 90% C++ 90%

Python 90% PHP 90% .Net 90%

Web Development

Web development refers in general to the tasks associated with developing websites for hosting via intranet or internet. The web development process includes web design, web content development, client-side/server-side scripting and network security configuration, among other tasks. In a broader sense, web development encompasses all the actions, updates, and operations required to build, maintain and manage a website to ensure its performance, user experience, and speed are optimal.

Graphic Design

Graphic design is a notion for defining a visual communication tool. In other words, this is a sort of craft which helps individuals create content of different quality and complexity levels by using multiple page layout and perspective hierarchy techniques. Such an approach involves applying raster or even vector images, as well as typography means to satisfy consumers' objectives and requirements. At the same time, the focus is still on the logical and harmonic displaying of the project's elements in order to boost end users' experience.

Application Development

Application development is the process of creating a computer program or a set of programs to perform the different tasks that a business requires. From calculating monthly expenses to scheduling sales reports, applications help businesses automate processes and increase efficiency. Every app-building process follows the same steps: gathering requirements, designing prototypes, testing, implementation, and integration.

Digital Marketing

Any marketing that uses electronic devices to convey promotional messaging and measure its impact. In practice, digital marketing typically refers to marketing campaigns that appear on a computer, phone, tablet, or other device. It can take many forms, including online video, display ads, and social media posts. Digital marketing is often compared to "traditional marketing" such as magazine ads, billboards, and direct mail. Oddly, television is usually lumped in with traditional marketing.
